Art Unit: 1631

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11, 13-23, 25-35, 37-47, 49-59, 61-71, 73-83, and 85-95, drawn to polynucleotides, methods for making vectors. Vectors, host cells, methods of making polypeptides, classified in class 536, subclass 23.5 and class 435, subclasses 252.3, 325, 320.1, and 69.1.
- II. Claims 12, 24, 36, 48, 60, 72, 84, and 96, drawn to polypeptides, classified in class 530, subclass 350.

The inventions are distinct, each from the other because of the following reasons. The nucleic acids, vectors, and host cells, of Group I are materially different from, and are therefore separate and distinct from the polypeptides of Group II. The methods of Group I are not needed to make the polypeptides of Group II, which polypeptides may be synthesized chemically or isolated from naturally occurring sources.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their different classification and recognized divergent subject matter, restriction for examination purposes as indicated is proper.

To search any two groups as outlined above would create an undue burden for the U.S. PTO because the searches of the non-patent literature are not only non-overlapping to any appreciable extent, but are also divergent in nature.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
